Professional Summary

Accomplished Database Architect with 20 years of experience in database architecture and engineering across multiple industries, including Healthcare, Banking, Telecom, and Logistics. Skilled in leading large teams, optimizing complex database systems, and aligning database solutions with organizational needs. Proven track record of driving database performance improvements, reducing costs, and enhancing data security. Extensive experience in database design, performance tuning, migration and managing cross-functional teams to meet business goals.

Professional Experience

Optum | Data Architecture & Engineering

Aug-2012 - Till Now

Sr. Manager - Software Engineering

Oversee database strategy and optimization efforts for the **HIX Core** platform, managing a global team and spearheading high-impact database solutions in a healthcare setting.

- Pioneered the design and optimization of database architectures, resulting in a 30% improvement in system performance and 40% faster query execution.
- Led a team of 6 senior database professionals, driving 20% growth in team productivity and fostering collaboration across cross-functional groups.
- Architected and delivered 30+ data models that aligned with business needs and regulatory standards, enabling smooth product releases and enhancing stakeholder satisfaction.
- Drove the performance tuning initiatives that decreased query response time by 30% while improving database scalability to support growing user demands.
- Instituted proactive monitoring systems, which resulted in a 50% reduction in database incidents and better operational efficiency.
- Championed the implementation of new features, maintaining 100% SLA compliance and ensuring timely delivery of key milestones.
- Led 30+ successful releases of new features, achieving 100% SLA compliance
- Implemented proactive monitoring scripts to ensure system uptime, reducing incidents by 50%
- Developed and enforced data governance frameworks, ensuring compliance with regulatory standards such as HIPAA. Automated data migration workflows, ensuring seamless transitions during system upgrades, database versioning, and cloud migrations

TSYS International

Senior Data Architect | Database Engineering

Dec 2010 - Jun 2012

- Led the successful migration from Informix to Oracle for a major payment processing system (TS Prime), improving data retrieval speed and system reliability.
- Led the development and implementation of advanced security features for card products, ensuring compliance with industry standards and enhancing overall system integrity.
- Collaborated with cross-functional teams to develop and deploy robust encryption and tokenization solutions for card products, safeguarding sensitive customer information.
- Designed and integrated multi-layered security protocols for card products, significantly reducing the risk of fraud and unauthorized access.
- Managed the performance tuning and database optimization efforts, supporting a variety of credit and debit card payment processing solutions.
- Developed and implemented Oracle-based procedures that enhanced data retrieval speed by 25% and optimized transaction processing efficiently.

R Systems International

Project Lead

Feb 2009 - Dec 2010

- Designed and optimized a telecom billing system for Intercall North America, focusing on data accuracy, system performance, and query optimization.
- Developed and implemented robust security measures for the invoicing system, ensuring accurate and secure billing of customers to their respective charges.
- Led a team of 10 developers to optimize PL/SQL procedures and enhance system throughput.
- Spearheaded performance tuning efforts that reduced query execution times by 40%, improving the efficiency of large-scale billing operations.
- Worked with cross-functional teams to enhance application performance, reducing processing time by 20% through effective PL/SQL optimization.

Headstrong (Techspan) India Pvt Ltd

Senior Database Developer

Apr 2007 - Dec 2008

- Provided database performance optimization for Private Wealth Management (PWM) systems at Morgan Stanley, improving data query performance and system stability.
- Worked closely with business teams to translate requirements into technical solutions, ensuring that high-net-worth clients' portfolios were accurately represented and efficiently managed.
- Led the design and implementation of real-time monitoring systems, ensuring continuous and accurate tracking of system performance and health, ensuring smooth operation of mission-critical financial services.
- Developed and deployed real-time monitoring solutions, providing instant visibility into critical metrics and enabling proactive issue resolution.
- Collaborated with the business team to design data models and implement data governance protocols that aligned with internal compliance standards

CMC Limited - A TCS Company

Software Engineer

June 2005 - Apr 2007

- Focused on performance tuning for the Export-Import Terminal Management System (ETMS) for CONCOR, improving transaction processing and operational efficiencies.
- Responsible for optimizing the performance of the Export-Import Terminal Management System (ETMS), ensuring efficient operations and minimizing downtime through continuous monitoring and tuning.
- Streamlined data processing workflows and improved transaction handling to ensure timely execution of import/export logistics

Technical Skills

- **Databases:** Oracle 19C/12c/11g, SQL Server, AWS RDS, MongoDB
- **Tools:** PL/SQL, SQL, Oracle Data Guard, Informatica, TOAD, Git, Jenkins
- **Languages:** PL/SQL, SQL, Shell Scripting, Python
- **Operating Systems:** Unix, Linux
- **Methodologies:** Agile, Scrum, Waterfall
- **Others:** Snowflake, Powerbi, Tableau

Education & Certifications

- Bachelor of Technology (B.Tech) in Computer Science and Engineering in 2005
- Project Management Professional (PMP)
- Oracle Certified Professional (OCP)
- AWS Certified Solutions Architect
