PROFESSIONAL EXPERIENCE

Founding Software Engineer

San Diego, USA

FEATHER APP, INC

Sep 2025 - Present

- Built a **Relationship Intelligence Platform** from 0 to 1 connecting users' email, calendar, and contacts across providers (Google, Outlook) to surface dormant relationships and recommend follow-ups. Developed using **React/Next.js, Node.js, TypeScript, PostgreSQL**, and **AWS**.
- Architected a distributed **ETL** pipeline processing 30K+ records per user in <90 minutes. Computed 25+ behavioral metrics per contact via fault-tolerant **BullMQ/Redis** workers, powering relationship scoring and contact discovery.
- Engineered a contact discovery and insight engine with 6 detection methods across email and calendar metadata, surfacing 30+ insights and 10+ new contacts per active user daily. Enabled customers to re-engage cold relationships.
- Designed a centralized **Contact Management System** syncing profiles across integrated sources in real-time. Enriched records via LLM-based signature parsing and REST APIs, maintaining 15+ fields with >98% accuracy without manual input.
- Migrated infrastructure from Render to AWS using **CDK (TypeScript IaC)** with VPC-level tenant isolation, **Cognito auth, Multi-AZ RDS**, and auto-scaling. Cut costs by 50% with automated multi-tenant provisioning via Docker.

Full-stack Developer

Remote, USA

WINWINLABS

Feb 2025 - Aug 2025

- Delivered a real-time IoT monitoring platform for cold-storage temperature regulation using ESP32 sensors streaming data via WebSocket to Firestore on **GCP**, with an **Angular** dashboard (SSR, RxJS, reactive signals) rendering live sensor feeds with multi-timeframe trend analysis.
- Optimized **Firestore** document structure for time-series sensor logs, reducing query latency by 30%.
- Defined **WebSocket** ingestion protocols and Firestore schemas to integrate hardware streams with the application layer, coordinating across electrical and product teams to deliver a functional MVP.

Software Engineer

Bangalore, IN

SHELL INDIA PVT LTD

Aug 2022 - Sep 2023

- Built an internal **incident management platform** for IT operations, processing 200+ incidents monthly with P1-P5 classification, root cause tracking, and cross-team escalation workflows.
- Automated backlog clearance and incident routing with **Python** scripts integrated into the platform, cutting Mean Time to Respond (MTTR) by 35%.
- Created **SQL pipelines** aggregating incident data across 4+ sources into operational dashboards used by cross-functional teams for trend analysis and resource allocation.

EDUCATION

UNIVERSITY OF CALIFORNIA, RIVERSIDE

Master's Degree, Major in Computer Science (3.8 GPA)

Riverside, CA, USA

Sept 2023 - Dec 2024

RAMAIAH INSTITUTE OF TECHNOLOGY

Bachelor of Engineering, Major in Computer Science (3.6 GPA)

Bangalore, IN

Aug 2018 - June 2022

PROJECTS

Social Connect Platform (GCP, Golang, Firebase, NextJS) | [GitHub](#) | [Website](#)

- Developed a full-stack social platform with a Go backend deployed on **Google App Engine** (Firestore with transactional writes, full-text search, Cloud Build CI/CD) and **Next.js** 14 frontend (**Firebase** Auth, real-time Firestore notifications, cursor-based pagination). Built a 27-tag preference system powering personalized content feeds.

WhisperWave Chat System (Golang, AWS, RabbitMQ, WebSockets) | [GitHub](#)

- Implemented a real-time chat backend in **Go** with WebSocket-based messaging and cross-server message routing via **RabbitMQ** for horizontal scalability. Added JWT authentication, **DynamoDB** persistence, and a service registry pattern for multi-instance coordination.

TECHNICAL SKILLS

- Languages:** Python, JavaScript/TypeScript, Golang, SQL
- Frameworks/Libraries:** React, Next.js, Angular, Node.js, Express.js, Jest, Prisma, BullMQ, RabbitMQ
- Databases:** PostgreSQL, Redis, MongoDB, DynamoDB, Firebase
- Cloud & DevOps:** AWS, GCP, Docker, Git, CI/CD (GitHub, Jenkins, Bitbucket)
- AI/ML Tools:** OpenAI API, AWS Bedrock, LLM Integration, RAG
