Network Architect | Automation & Security Expert

Network Engineering leader with over 15 years of experience designing and maintaining resilient global backbone and distributed datacenter infrastructures across fintech (Goldman Sachs), hyperscale (Meta), and service provider environments. Proven track record in optimizing ultra-low latency trading networks and exchange connectivity, delivering significant reductions in TCO and operational costs. Expert in high-performance routing (BGP, MPLS, Segment Routing) and intent-based network automation.

Core Competencies

- Fintech & Trading Networks: Expertise in exchange connectivity, multicast troubleshooting, and ultra-low latency optimization.
- Backbone & DC Architecture: Specialization in global backbone and optical network design, utilizing protocols such as BGP, IS-IS, MPLS, and SR-TE.
- Automation & Orchestration: Advanced proficiency in Python, Ansible, and NSO for network validation and rapid service deployment.
- Advanced Analysis: Capability in troubleshooting complex performance issues through Wireshark, Forward Networks mathematical modeling, and monitoring tools like Grafana and Prometheus.

Professional Experience

Opplane (Startup), Fremont

Oct 2025- Present

Resident Engineer - Products and Solution Engineering

- Proven track record in startup environments, highlighted by the successful integration of a new product into a Tier-1 US Service Provider's infrastructure.
- Managing the full NPI lifecycle: overseeing engineering delivery, solution design and customer relations.

Meta, Fremont

June 2024 - Sept 2025

Network Deployment Engineer

- Manage Edge Networks in NORAM and LATAM regions, ensuring high availability and performance for millions of users.
- Deploy and troubleshoot the RoCEv2 on EVPN-VXLAN fabric for AI workloads.
- Spearhead the introduction of newer 800G platforms, unblock capacity additions of ~230T and manage critical projects for the firm including moving AI workloads to the cloud.
- Integrated the network orchestration workflow engine with next work-streams which increased program efficiency by 15%.

Viasat, Carlsbad

March 2021 - May 2024

Network Platform Engineer

- Designed and deployed CoreNode (on-prem) to AWS connectivity, considering reliability, resiliency and security.
- Designed new datacenter topologies specific for sovereign countries with satellite communication constraints in mind.
- Evaluated and integrating off the shelf day-to-day operations tools including Forward Networks (mathematical modeling), grafana and prometheus.
- Designed and implemented a new intent-based network validation solution from ground-up that saved the company half-a-million in operational costs and reduced time to deployment.
- Designed and implemented a micro-service which reduced the time to deploy new network services by 50%.

Comcast, New Jersey**August 2020 - March 2021****Technology Architect, Contingent**

- Owned the engineering and architecture aspects for the Service and Network Automation Platform(SNAP), Virtual Services Gateway (vSG) platform, and Internet Monitoring Platform (IMP) platform. The abstraction layer integrated with 3rd party SD-WAN products. The solution was deployed to 10,000+ customers in NORAM.
- Led a team of 10 members in ensuring that the new SD-WAN solution adhered with all the customer requirements.

Goldman Sachs, New Jersey**February 2015 - July 2020****Vice President (Network Architecture)**

- Own, Design and Manage Global MPLS solutions including the Global Transport Interconnect, Regional Office Connectivity, B2B Vendor Connectivity, Metro Optical Backbone, Firewall automation
- Design the exchange connectivity network and troubleshoot issues with multicast.

Key Contributions:

- Designed and developed an office-in-a-box product that completely automated the provisioning of a remote office. It paved the way for deployment efficiency and design consistency.
- Design, manage, and support F5 and load balancing for critical applications across on-premise, multi-cloud, and hybrid infrastructures.
- Design, manage and support the microwave radio network as a redundant path for MPLS connections.
- Designed and developed POD Deployer v2.0, leveraging ztp feature-set. It was used to deploy User access and Datacenter PODs (Automated ToR, AGG), deploying ~1000 of switches in under 15minutes. IP Address management using IPAM.
- Spearhead the adoption of WAE in the backbone for network planning and what-if analysis.

NBN, Australia**June 2012 - August 2013****Configuration & Integration Engineer, Contingent**

- Configuring, integrating & troubleshooting Aggregation, DCN(MPLS based) & SEM Domains
- Mentored new graduates with projects which brought in operational efficiencies saving ~4 person hours per week.

BT, London**May 2010 - May 2012****Software Designer and Developer, Contingent**

- Designed and Developed modules for the next-gen vision platform including DVR, MediaPlayer, Live Pause, Upgrader with Oregon middleware.

Education**Master of Business Administration (MBA), Entrepreneurship and Strategic Innovation, 2024**

University of Illinois Urbana Champaign

Master of Science (M.S.), Electrical and Computer Engineering, 2014

Carnegie Mellon University

Skills

CCNA | CCIP | OCI Certifications | hands-on experience with Arista | Cisco | Juniper | Accedian | OpenStack | DDI | AWS | TCP/IP | UDP | LAN/WAN | GRE | IPSec | VRRP | SNMP | Streaming telemetry | Palo Alto firewalls | F5 & AVI Loadbalancers | BGP | OSPF | ISIS | MPLS | RSVP-TE | SR-TE | BGP-LU | IGMP | PIM | L3VPN | L2VPN | DMVPN | EVPN-VXLAN | SONIC | SDN | SD-WAN | Network Security | Ansible | NSO | Wireshark | Python | Forward Networks | Grafana | Prometheus | what-if analysis | mathematical network modeling | GitLab | CI/CD | Jenkins | configuration management | MYSQL | Meraki
