

## George Abraham, Ph.D.

16 years, three platform products, zero to one to production. Making AI-assisted workflows predictable where speed matters, and legible where trust does.

### EXPERIENCE

#### Principal Product Designer

Feb 2026 – Present

Infragistics Inc., Cranbury NJ — Reveal BI

*Joined an established SDK-based self-service BI platform to lead UX on semantic modeling, core visualization, and a configurable white-label design system for enterprise integration.*

- **Mental Model Alignment:** Conducted contextual interviews with data analysts to realign the data-modeling UX with user workflows, removing legacy engineering constraints from the interface.
- **Semantic Model Design:** Designed the model layer so the product reasons over meaning, not raw tables. Sequencing queries across multiple sources broke that model, surfacing engineering research needs early and cutting scope to a version that shipped now.
- **Design System Foundation:** Audited existing components and patterns to define the white-label backbone for Reveal BI as a standalone product, scoping the theming architecture ahead of build.

#### Principal Product Designer

Jan 2021 – Jan 2026

Infragistics Inc., Cranbury NJ — App Builder

*Defined product strategy, roadmap, and design execution for App Builder, a cloud-based design-to-code platform. Made design system integrity the priority, so enterprise teams could build production-grade Angular, React, Blazor, and Web Component apps without rework.*

- **Property Panel Architecture:** Conducted a task-based usability study to map how users intuitively locate, act on, and confirm properties; translated these validated mental models into a dynamic schema generated across 60+ components.
- **Design Governance:** Aligned Figma design system standards, documentation, and release cadence across 4 distributed teams (30+ contributors), without direct authority over any of them.
- **AI Behavioral Constraints:** Established rigid visual boundaries for AI-generated UI modifications after observing users lose trust when changes went beyond their active selections, ensuring AI output matched user expectations rather than raw engineering policy.
- **Developer Workflow Integration:** Integrated platform hand-offs into enterprise developer ecosystems via GitHub/Azure DevOps PR automation and OpenAPI, ensuring generated code entered pipelines without engineering cleanup.
- **UX Debt Resolution:** Bypassed engineering bandwidth constraints by directly authoring front-end PRs to implement critical quality-of-life user fixes, ensuring polished design execution without delaying the core sprint roadmap.

#### Senior Product Designer

Jul 2019 – Dec 2021

Infragistics Inc., Cranbury NJ — Indigo.Design

*Led product and design for turning a prototype-sharing workspace into an enterprise design and evaluation suite, launching collaborative cloud workspaces, advanced prototyping, and remote unmoderated usability testing.*

- **Human-Centered Analytics:** Designed and launched an unmoderated usability testing platform from scratch, integrating click maps, user funnels, and session replays to pinpoint UX friction.
- **Insight Fidelity:** Designed click-map reporting to make hesitation and error clusters visible across sessions, something individual session replay couldn't scale to. Tested it with a mixed panel of designers, developers, and PMs, then compared their reads against the original analysis to find where comprehension broke down.
- **Strategic Product Alignment:** Identified the Throwaway-prototype problem through customer research, the insight that became the founding argument for App Builder's design-to-code roadmap.
- **Enterprise Revenue Growth:** Drove product strategy, security positioning, and execution for an on-premises deployment option for financial and enterprise customers with strict compliance requirements, capturing ~40% of Indigo.Design sales.

## Senior Product Designer

Sept 2013 – Jun 2019

Infragistics Inc., Cranbury NJ – Indigo Studio

*Co-invented Indigo Studio and scaled it from a zero-to-one concept into a new corporate product vertical, leading product strategy for a high-fidelity, scenario-driven interactive prototyping platform.*

- **Patented Innovation:** Co-invented a state based UX prototyping approach (USPTO 10157046) reducing time to create prototype by 3x and maintenance by 5x, enabling enterprise teams to validate user flows before writing code.
- **Dynamic State Map:** Designed the state map to build itself as users added interactions, each connection visible in real time, so designers could trim branches once they understood scope instead of overbuilding upfront.
- **Business Unit Scale:** Built a product vertical contributing 15% of annual revenue with a 90% renewal rate; customers cited prototyping speed and interaction fidelity as primary retention drivers.

## Interaction Design Manager

Oct 2010 – Aug 2013

Infragistics Inc., Cranbury NJ – Multiple Products

- **Adaptive Team Mentorship:** Managed 4 designers across 4 products. Coached junior talent on core craft and research, while partnering with senior peers through collaborative exploration, design, and critique.
- **Operational Design Triage:** Co-developed a resource allocation triage process based on engineering backlog scope, successfully redirecting designer bandwidth to high-impact strategic work and eliminating sprint burnout.

## Interaction Design Lead

Feb 2010 – Sept 2010

Infragistics Inc., Cranbury NJ – Ignite UI Components

## EDUCATION

- **Ph.D. in Information Studies (Human-Centered Design),** Drexel University, PA
- **M.S. in Industrial Engineering,** University of Illinois at Chicago, IL
